

Make The Switch To Avocado Based Straws

- 100,000 marine mammals die each year from plastic waste.
- Americans use 500 million plastic straws each day.
- 1 million seabirds die every year due to plastic straws.
- 1,000 turtles die every year due to plastic.

- The energy used to produce 1 metal straw is equivalent to the energy used to create 90 plastic straws.
- Producing 1 metal straw is equivalent to producing 150 plastic straws.

- Made from ingenious food waste innovation: up-cycling avocado pits.
- Holds up in water as cold as 20 degrees. So it won't get mushy like regular paper straws.

- The avocado straw degrades in 240 days whereas regular plastic straws can take up to 100 years.
- There is also avocado spoons and forks, this way companies can buy from the same manufacturer.

- No need to cut down a tree and use potatoes or cornstarch. These avocado straws take from waste so nothing is taken away from the supply chain.
